AA - Architecture [2009]

ABOUT

I combine UX design and visual design to find creative solutions to problems. I have a strong technical background and love the methodology of good design.

It is my goal to create strong user experiences that will keep users engaged and coming back. I specialize in responsive website design, and I am very savvy with front-end development and best practices.

I am always looking for ways to grow and develop in this industry, and believe I can tackle any challenge at hand.
